DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-8 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims do not produce any tangible results. The practical application of the claimed invention cannot be realized until the information determined is conveyed to the user. For the result to be tangible, determined/corrected real input power level and real output power level would need to output to a user or displayed to a user or stored for later use by a user. Hence, the claims are treated as non-statutory functional descriptive material (see MPEP 2106 and

http://www.uspto.gov/web/offices/com/sol/og/2005/week47/patgupa.htm).

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

Application/Control Number: 10/567,172

Art Unit: 2863

Page 3

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

"Comprises" (line 3) is improper.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Drawings

The drawings are objected to because the steps (Figs. 2, 5) are not labeled. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 2-4 and 6-8 are objected to because of the following informalities:

- claims 3, 4, and 8, "ATE" is not defined.
- claims 2, 6, and 7, "RF" is not defined.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al. (US 6,064,4501).

Regarding claims 1 and 5, Roberts et al. discloses in a test apparatus (Fig. 1A) used for measuring the input and output characteristics of an amplifier (input and output of 10, Fig. 1A), a method and system for determining test program parameters (Fig. 4's), comprising:

- calculating input loss (column 9, lines 33-34) from the test apparatus power source (column 4, lines 58-61) to the input of the amplifier (Fig. 1A), defining an input loss correction factor (column 9, lines 35-36);

- calculating output loss (column 12, line 60) from the amplifier output to the power meter of the test apparatus (column 12, lines 59-62), defining an output loss correction factor (column 12, lines 60-61);

However, regarding claims 1 and 5, Roberts et al. does not disclose using the input loss correction factor to determine a real input power level; and using the output loss correction factor to determine a real output level.

Nevertheless, Roberts et al. discloses compensating the loss by higher gain toward the output (column 1, lines 59-60).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to compensate the input loss provided by Roberts et al. to determine the real input and output power levels for the purpose of adjusting the gain toward the output (column 1, lines 59-60). It is noted that the real input and output levels determine the real gain.

Conclusion

Roberts et al. does not disclose calibrating RF tests as a function of the input loss correction factor and the output loss correction factor, wherein the RF tests include at least one of the following: input power, output power, gain, efficiency, and detector error, linearity, noise figure (claims 2, 6, 7) or calculating an initial input loss from the difference of the first gain change and the first initial output loss; setting power level of the ATE to sum of input power lab and initial input loss (claims 3, 8).

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Nghiem whose telephone number is (571) 272-2277. The examiner can normally be reached on M-H.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571) 272-2269. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
